## COMPLIANCE CHECKLIST

### Spacesaver Storage Systems

Through our extensive network of local Area Contractors, Spacesaver provides a level of experience and competency that others simply do not. From architectural constraints and building codes to storage system design and floor loading, we have the expertise to handle every issue and customer concern.

**Fire Protection** – Observe minimum sprinkler clearances. Spacesaver's System Fire Park automatically positions carriages to create equal spacing between all ranges in the event of a fire.

**Accessibility** – Open aisle width can be designed to meet the accessibility standards which require a minimum aisle width of 36" (914 mm).

**Sustainability** – Spacesaver is committed to environmental sustainability through the use of green manufacturing processes and materials as well as space conservation.

**Floor Loading** – The flexibility of the Spacesaver rail system allows the Designer a full selection of options for distributing the imposed floor loads.

**User Safety** – A combination of passive and active safety features are available to protect people and objects in an open aisle.

**Quality** – As our ISO 9001:2000 certification attests, Spacesaver is dedicated to the highest standards of product quality.

**Accessibility** – Control heights and button size meet accessibility standards and provide other ergonomic advantages.

**Seismic Anti-Tips** - Approved even for the most earthquake-prone areas of the country. Stability is designed right in.

**Design Services** - System weights and 3D renderings provided automatically by Configura software help create an optimal storage system design.
